

Calls and Audio in the Shower Via iShower2

Written by Marco Attard
24. October 2014

Customers with a need to listen to music or take care of calls while in the shower should find the iShower2, a waterproof wireless speaker one can connect to smartphones, relevant to their interests.

It features 60m wireless range and play, pause, and skip controls, as well as a built-in speakerphone, allowing one to keep their mobile devices safe and dry while listening to music or answering calls. An LED clock provides a means of reading the time, and it also saves the music preferences and accounts of up to 5 users.

In addition it features multiple mounting options together with water resistance.

"We're constantly creating new products and improving existing ones intended to make life easier and our homes smarter," maker iDevices says. "It's really all about the experience, and who doesn't love to sing in the shower?"
