

Optimus 3D Hits Europe

Written by Marco Attard

LG launches its Optimus 3D, starting off with Europe with a launch party in Spain.

The phone itself builds on LG's own Optimus range, now with one addition-- 3D (as the name suggests). It shoots 3D photos and video (via x2 5MP lenses) while carrying a glasses-free 4.3" WVGA 3D display.

A 1GHz OMAP 4 dual-core processor powers the device.

To make up for a lack of 3D content, the phone converts 2D content into 3D-- a function currently limited to images and video, but LG has plans for future game 3Dconversion

Media sharing connections come through HDMI and DLNA interfaces.
