

The Windows 7 Phone

Written by Marco Attard

Fujitsu has a solution for customers thinking Windows Phone is not enough-- the F-07C, a Windows 7 smartphone.

It's basically a PC inside a compact (measuring 125mm x 61mm x 19.8mm) design, with a 1.2GHz Intel Atom Z600 processor, 1GB of LPDDR400 memory and 32GB of eMMC storage.

The sliding 4" LCD display (1024 x 600 resolution) reveals a QWERTY keyboard and trackball for mouse control. Ports include USB and HDMI.

Since it has a x86 processor and standard Windows as OS, the F-07C runs any Windows software, including Internet Explorer 9 (included as default), Adobe Flash and Silverlight. Fujitsu also includes a 2-year Microsoft Office 2010 personal licence.

The device should launch this month in Japan, but there's no word if Fujitsu has any European launch plans yet.
