Customers demanding a phone with the highest possible video recording resolution? Acer proposes an answer at IFA 2013 with the Liquid S2, an Android handset with 4K video recording capability.

The 13MP rear-facing camera features an LED ring flash and BSI sensors as well as software enhancement such as "quick first shot" (takes pictures from the unlock screen), "smart best shot" (automatically takes multiple shots for best selection) and separate focus/exposure adjustment.

Running on a 2.2GHz Qualcomm Snapdragon 800 processor, the Liquid S2 features a 6-inch IPS display, 4G LTE and wifi 802.11 ac connectivity, 2GB RAM, 3300mAh battery, Doly Digital Plus-powered speakers and a 2MP front-facing camera.

Also seen at IFA 2013 are further Acer launches-- namely the 10-inch Iconia A3 tablet and the Aspire R7-572 Windows 8.1 notebook with "Ezel" flexible multi-mode hinge.
