

Chinese "Cloud-Based" Mobile OS to Get English Release

Written by Marco Attard
16. September 2011

Chinese mobile OS Aliyun OS will get the English language treatment treatment this month, according to a company executive speaking to Reuters.

Aliyun OS creators Alibaba Group is currently also in talks with global hardware vendors for possible partnerships using the OS, even if it declines to give details.

The company will also launch a tablet (presumably for the Chinese market) within the next 2 months.

Announced last August, the Aliyun OS is a Linux-based OS handling both both webapps (Javascript and HTML 5) and Android apps while synching user data on the cloud.
