Cortado launches Cortado Corporate Server 7-- the first enterprise mobility solution taking advantage of the business functions making part of iOS 7, at least according to the company.

The software allows mobile application management (MAM) for every app within the app store without further modifications or restriction, thus sidestepping the legal issues involved with app wrapping while keeping the iOS usability intact.

Admins can easily set policies and make use of security features such as the iPhone 5S fingerprint sensor. Simplifying administration even further is the integration of mobile device management (MDM) with a company's Active Directory.

Productivity applications for on-premise file sharing, printing solutions and a secure browser are also included.

As well as iOS 7 Cortado Corporate Server 7 supports PCs, Macs, Samsung SAFE and KNOX.
