

CEDIA White Paper on Mobile Devices

Written by Marco Attard
16. November 2012

CEDIA releases the 3rd white paper in the Mobile Devices in Residential Systems Integration series-- "Using Mobile Devices as a Control Platform."

The white paper tackles the use of mobile devices within control applications, and provides guidance on design considerations in integration and automation with mobile devices.

Both high-end and budget-conscious customers increasingly demand the integration of mobile devices into integrated systems-- making it a must for installers to learn how to do exactly that.

"Many consumers want to use a device they are familiar with, such as a smartphone or tablet to control their home," CEDIA says. "This can sometimes be challenging to integrate, but the considerations outlined in this white paper can help dealers create a seamless control experience."

The white paper is now available free of charge for Region 1 CEDIA members.
