

Samsung Intros Galaxy Tab S2

Written by Marco Attard
24. July 2015

Samsung announces the Galaxy Tab S2-- a tablet in either 9.7- or 8-inch sizes featuring what the company describes as "the thinnest and lightest metal frame of its size on the market."

For the record, the tablet is 5.6mm thick and weighs 389g in its 9.7-inch form and 265g in 8-inch. Both variants are otherwise identical, having 2048x1536 resolution Super AMOLED displays and an octacore application processor combining quad 1.9GHz + quad 1.3GHz processors.

Android 5.0 handles OS duties, while further specifications include either 32 or 64GB storage (expandable to 128GB via microSD slot), wifi or wifi and LTE connectivity and a built-in fingerprint reader.

The Galaxy Tab S2 should hit global markets from August 2015.
