

The Sportsman's Wrist-Mounted Gadget(s)

Written by Marco Attard
15. July 2011

Your customers of a more athletic nature may finally find their ideal gadget in VEA's take on the sport watch -- one combining mobile phone, camera, GPS, MP3 player and (of course) watch in a wrist-mounted form factor.

Simply named "Sport", its phone has all regular functions, including EDGE connectivity, MMS and bluetooth. It also comes with a variety of performance tracking functions-- including speed, distance, calories burned and pulse.

It can also record video and play mp3s, with 8GB's worth of internal memory.

The Sport should be available from late November.
