PANS unveils a charging solution aiming at customers using both iDevices and non-iDevices at CEATEC 2011-- the Umiushi Smapho 2800, an external battery with built-in iPod dock connector and micro-USB plug.

Users can connect devices to both dock connector and micro-USB plug simultaneously in order to charge devices on the go.

The Smapho 2800 carries a 3.7V/2800mAh Li-ion battery, with 5V 1A output and 5V 800mA input.

It is available in 3 different colours (white, blue or red) and should hit international markets from December 2011.
