

One can usually rely on Logitech for new iDevice accessories, and since [the iPad Air is soon available](#) the company reveals 4 protective and keyboard products designed to "perfectly complement" the thinner and lighter tablet.

The accessories in question are the FabricSkin Keyboard Folio, the Ultrathin Keyboard Cover, Ultrathin Keyboard Folio and Folio Protective Case.

All three keyboard products feature Bluetooth connectivity and "maximised" key sizes. The FabricSkin and Ultrathin keyboard folios are water-repellent, promise battery lives of up to 30 days (when used around 2 hours daily), feature a kickstand to prop iPads up.

The FabricSkin keyboard is similar to Microsoft's TouchCovers, with keys built into the fabric surface, while the Ultrathin folio is the more traditional, pressable option.

On the other hand the Ultrathin keyboard cover is the perhaps more protective option, featuring aluminium construction with a built-in slot propping iPads upright, even if it only covers device displays.

The final product is the Folio protective case, a simple water-repellent cover offering two-sided protection against the elements.
