

Tonino Lamborghini Intros Quantum Headphones

Written by Marco Attard
09. May 2014

Tonino Lamborghini launches the Quantum, a high-end in-ear headphone series designed for use with mobile devices featuring 3 models -- the EL-01, ML-01 and the HL-01.

All carry TFAT (Thin Film Acoustic Technology) for high-resolution audio tuning, gold-plated 3.5mm connectors, built-in smartphone remote control and "exclusive" Italian design.

The EL-01 is the most basic model, being weightless earbuds with a 10mm driver and a one-button remote. The ML-01 follow, with an 8mm driver and a 3-button remote control.

The top model in the series is the HL-01 packing a 7/15mm dual driver with integrated crossover.

All the above mentioned headphones should be available in European markets from June 2014.

Please note Mr Lamborghini, his companies and business are not linked to the car company Automobili Lamborghini, the car company founded by Tonino's father, Ferruccio Lamborghini, now owned by Audi.
