

The Antibacterial iPhone 6 Case

Written by Marco Attard
31. October 2014

NueVue launches the first antibacterial phone cases for the iPhone 6 and 6 Plus, claiming to eliminate germs, smears and fingerprints from smartphone screens as well as protection from accidental damage.

According to the company the cases feature "BioCote" technology of the kind found in healthcare environments. This kills up to 99.9% of bacteria and provides customers with piece of mind, seeing how smartphones are often blamed for skin conditions such as irritations, blemishes and bad complexion.

Furthermore the cases feature microfibres to automatically clean screen from greasy finger marks every time the iPhone is removed from the case. The casing is also shock-resistant and snugly fits the smartphones for easy removal.

The NueVue antibacterial phone cases are available in either leather (in black, pink or tan) and animal-friendly faux leather (in orange, purple or teal).
