

Choosing which devices to carry when on the move can be challenging, so the latest solution from Cayllee may prove a valuable combination for many, particularly women. The Knight Power Bank combines a 5,200mAH power pack with a powerful torch, a deafening alarm and a built-in SOS signaller.

Constructed with a solid unibody frame, coated with a comfortable soft-touch surface, and available in light grey or cyan, the Knight Power Bank is a genuinely wide ranging solution. The 5,200mAH battery (nearly 3x that in the iPhone 6) is charged through a micro-USB cable (included), and offers a full-sized 2.1A USB output socket to connect to pretty much any mobile device. An array of four LEDs gives a charge status indication when the device is turned on.

The Knight Power Bank also includes a bright 200 lumens LED torch, and a powerful siren alert, delivering up to 130dB. In use, the functions proved as powerful as the battery, with the light being powerful, and the siren deafening.

A simple slider switch offers four positions: torch only, siren with flashing light, SOS, and Off. A little time spent memorising the positions would be helpful, as there is little tactile feedback, and it seems all too easy to activate the siren by accident.

Cayllee's Knight Power Bank Blends Power and Security

Overall this is a powerful device, and one that would be bound to engender a sense of security. It also has the benefit of being entirely legal, unlike some of the alternatives marketed.

Cayllee expects the Knight Power Pack to retail for the equivalent of \$39.95, and is on the lookout for distribution partners for this and the company's other mostly power-based products. Contact sales@channelmediaeurope.com for more information.
