

Beats Headphones Match iPhone Colours

Written by Marco Attard
17. April 2015

Apple refreshes the Beats Solo2 Wireless headphone lineup with 3 new colours-- gold, silver and space gray, perfect for customers wanting to match their headphones with their iPhones, iPads or MacBooks.

The Solo2 headphones connect with iDevices via Bluetooth (with up to 9m range) and carry a rechargeable battery the company says powers up to 12 hours of continuous use. Built-in "b" and volume buttons handle phone call, song skipping and volume controls.

However, colour changes aside the headphones remain identical to their previous versions which, as the first Beats products following the Apple acquisition, launched back in December 2014 in black, white, red and blue.

The Solo2 Wireless headphones are available from April 2015.
