20. November 2015

Mobile battery case maker Mophie announces the next generation of Powerstation universal external batteries, with offerings handling all kinds of devices, including the Apple iPhone and iPad.

The latest Powerstation battery packs are the thinnest and lightest from the company. They are available in 5 capacities-- 1X (2000mAh), 2X (4000mAh), 3X (6000mAh), 5X (10000mAh) and 8X (15000mAh). The smallest 1X model is 6.9mm thick and 95.5mm long, while the largest 8X is 12.1mm thick and 183.9mm long, with the other sizes being somewhere in between.

The higher-end 5X and 8X models support a Mophie Power app allowing users to check remaining Powerstation battery life and how long charging a device to full takes. Push notifications let one know when batteries are low or fully charged.

All models also (except the 1X) also support pass-through charging to power iDevices before the Powerstation, while the 3X, 5X and 8X models feature two ports for the simultaneous charging of multiple devices.

The Mophie Powerstation line is currently available on a preorder basis.
