

The Thinnest Air Case iPhone Battery Case?

Written by Marco Attard
15. April 2016

A startup takes to Indiegogo to launch what claims to be the thinnest iPhone battery case yet--the Air Case, an accessory adding just 3.8mm in thickness to the smartphone.

The Air Case is compatible with the iPhone 6, 6 Plus, 6S, and 6S Plus, and weighs all of 69g. It carries a 2400mAh battery the maker claims doubles the power available to the iPhone, adding over 8 hours of use.

The Lightning port takes care of charging duties, and in turn takes care of charging duties. While charging, pass-through technology ensures the phone takes power first, with charging time taking around 3 and a half hours for both phone and case.

Should the crowdfunding campaign go to plan the Air Case starts shipping from August 2016.
