SanDisk announces the iXpand-- an iPhone 6 and 6s case series promising to expand storage by either 32, 64 or 128GB while adding durable protection.

The storage connects to the smartphone via Lightning port. A companion app allows users to set camera roll storage directly to the case, and content protection is ensure via password and migration to SecureAccess Windows/Mac software.

Power needs are also covered through a 1900mAh battery pack accessory-- one SanDisk claims can double the life of an iPhone. The pack is automatic, with no need for a separate manual charge, since it "detects when your phone's battery runs low and kicks in to charge it."

The iXpand Memory Case is available now in blue, grey, red and teal colour options.
