Belkin announces an addition to the Mixit DuraTek durable cable line-- a USB-C cable featuring Kevlar-reinforced conductors and double-braided nylon shielding on the outside.

The USB-C cable is certified by both the USB Implementers Forum, and includes a 5-year limited warranty. The length is 1.2m, and it comes in pink, gold, silver and black colours. The Kevlar used in the conductors is the same used in a broad range of industrial and consumer products, while longer, flexible strain-relief absorbs stress from bending, avoiding breakage.

“We've made our DuraTek cables so strong because we know that ordinary cables aren't tough enough to endure the challenges we put them through. After all, cables should be made to serve us, not the other way around,” Belkin says. "We were inspired by industrial cabling, race car and aerospace construction methods, and tested many construction methods to finally arrive at the best cable we have ever made."

The Mixit DuraTek USB-C cable is available now.
