With Windows 8 to launch in October, your customers will want upgrades on their Microsoft peripherals selection: for example, wireless and tablet-friendly keyboards and mice.

Most interesting are the **Wedge Touch Mouse** and Keyboard-- Bluetooth-enabled compact devices with Windows 8 features (such as shortcut keys) and pleasing industrial design.

The Wedge Touch Mouse features 4-way scrolling and Bluetrack technology, allowing customers to use it on any surface. Meanwhile the **Wedge Keyboard** has a removable cover that doubles as a multi-angle (via centre joint) tablet stand and a set of hotkeys for launching Windows 8 menu functions.

The Explorer Touch Mouse and Bluetooth Mobile Keyboard 5000 get an update, and are now the **Sculpt Touch Mouse** and **Sculpt Mobile Keyboard**-- thanks to extra Windows 8 functions and a change of Windows logo.
