SteelSeries launches the Freedom to Play family at Gamescom 2012-- a peripheral series ideal for mobile device users, complete with controllers and headsets.

"The SteelSeries Freedom to Play product line-up is designed for players who want to play and experience more than just swiping and word games on their tablets and phones," the company claims.

The product family includes the Free Mobile Gaming Controller, a wireless Android- and iOS-compatible Bluetooth controller. It has a button layout similar to the Playstation controller and a rechargeable battery hosting up to 10 hours of "non-stop playtime."

Mobile device users also get the Free Touchscreen controls-- conductive rubber suction cups users can stick on a touchscreen to mimic the "feel" of physical controller buttons.

Headsets come in two varieties-- the customisable Flux Headset (a cross-platform, on-ear headset) and the Flux In-Ear Pro Headset.
