SanDisk launches Connect, a wireless flash memory storage line with a pair of devices-- the Connect Wireless Flash Drive and the Connect Wireless Media Drive, both designed for use with multiple mobile devices.

The Connect Wireless Flash Drive is a wireless pocket-sized means of storing, sharing and streaming content across PCs and mobile devices. It offers up to 32GB of storage and up to 4 hours of continuous streaming on a single charge, without need for internet connections or cables.

The Connect Wireless Media Drive is the larger offering, with 64GB of storage and an SDHC/SDXC memory card slot. SanDisk claims it simultaneously streams up to x5 different movies to up to x8 users, and the battery powers 8 hours of continuous streaming on a single charge.

Both are compatible with PC and Mac computers as well as iOS, Android and Kindle Fire devices (via apps). A simple drag and drop interface handles file management duties.
