

HTC launches a couple of smartphone accessories at a London event-- a sequel to the Mini Bluetooth headset (called the Mini+) and the Fetch, a Bluetooth/NFC tag ideal for customers prone to losing mobile devices.

Not to be confused with the [One mini](#), the Mini+ is a headset accessory for users of large smartphones. It connects to handsets via NFC or Bluetooth, and allows one to make and answer calls through phone connection.

Like the HTC One it also carries an IR blaster, allowing it to double as a TV or projector remote, while a built-in laser pointer might find use in presentations or the annoying of household pets.

It is compatible with the HTC One, One mini, Butterfly s, Desire 200 and Desire 500.

As mentioned earlier the Fetch is a Bluetooth/NFC keychain tag allowing one to find lost phones. It pairs with devices and makes them ring with the press of a button from up 15m distance, and beeps should one leave it behind.

Should one lose both smartphone and Fetch a map feature allows one to hunt the two devices down.

The Mini+ and Fetch should be available sometime during Q4 2013.
