The Logitech Rugged Combo is a combination of case and keyboard allowing 9.7-inch tablets such as the iPad to withstand the knocks and drops faced by devices used by children in the classroom.

The Rugged Combo protects tablets from drops up to 1.8m, and includes a kickstand with mechanical hinges promising to hold the device sturdily at any angle. Meanwhile the keyboard is physically connected via secure proprietary connector, and provides "laptop-like typing" as well as a secure data entry point in case teachers want to submit tests on the tablet.

A transparent window on the back of the case allows authorities to scan and mark tablets before and after students use school property.

“iPad is changing the way teachers teach and students learn, and the Logitech Rugged Combo for the new 9.7-inch iPad is built from the ground up with personalized-learning in mind,” Logitech says. “We worked with Apple to design the Rugged Combo to be incredibly durable and protect iPad while bringing a secure keyboard connection that’s approved for testing, so teachers and students can focus on expanding what’s possible inside the classroom and beyond.”
